Greg,

For background information. I added some of the email traffic. You will have to dig down to see the Up-dates. Let me know if you have any questions. I will send you future up-dates as they arrive.

Thanks for the note and minutes. Just to clarify: DEQ is conducting their normal monitoring. EPA is doing the mobile air monitoring.

Rosanne,

Good Saturday morning. Mick suggested and I agree that you might want to have this HHS SOC update to see what the Feds are doing and anticipating. Also, just to keep updated with HHS thinking, we've had questions about "human health monitoring" from Dr. Nicole Lurie, the ASPR. I told them yesterday that LA was monitoring the air and beaches as well as the marine life. Thanks for the minutes you sent on checking in with the ED and clinics; that is great info and I'll pass that along as well.

Thanks, Skip

HHS ESF 8 R4/6 Steady-State Phase: Oil Platform Explosion, Gulf of Mexico (UPDATE #4) **REVISION**

Source: R4/R6 RECs, FDA, CDC, ASH, DHS NOC, FEMA

What: An internal conference call was held between ASPR Senior Leadership, OPDIVs/STAFFDIVs, and regional emergency coordinators regarding the BP Oil Spill in the Gulf of Mexico. **At the conclusion of the call, it was determined that further assessment and surveillance was needed regarding the significant health concerns associated with seafood/shellfish contamination and the potential respiratory exposure to volatile organic compounds. FDA is closely monitoring the situation and working with the affected states to assess potential public health concerns related to seafood. As a**

preventative measure, states are closing shellfish harvesting areas which may become contaminated with oil from the spill. Upon request from states, FDA will provide laboratory assistance for the analysis of seafood samples to determine levels of contamination. NCEH/ATSDR is coordinating with Region 4 and 6 regarding poison control issues, air sampling, and possible surveillance activities.

Louisiana and Mississippi are actively monitoring the impact of the oil spill on drinking water and marine life. There are no maritime restrictions to traffic in or out of the Mississippi River Delta; hull inspections and oil decontamination plans not activated.

Alabama and Mississippi have activated their EOCs to Level III (Partial Activation) and are working with their local Emergency Management Agency to monitor air quality. There are no evacuation orders in effect; however, states are making plans in the event evacuations become necessary. Florida and Louisiana (Crisis Action Team) EOC is at Level III operations (Monitoring/Minimal Staffing). FEMA RIV Ops has not activated at this time.

When: 2200EDT 21Apr10 (30Apr10 2010EDT)

Where: 52 miles off the coast of Venice, LA

Error! Filename not specified.

How: Oil spill (resulting from an oil platform explosion)

Actions/Follow-Up: No request(s) for federal ESF- 8 support received; however, HHS will continue to maintain a readiness posture in the event assistance is needed. WebEOC and SOC Portal pages have been created for this event (re: 2010 BP Oil Spill Response – Gulf of Mexico). The SOC will continue to monitor this event and provide updates as they are received. Medical, infrastructure and other response information can be found on MedMap (<https://medmap.hhs.gov/medmap/login.html>) and will be updated as new information becomes available. *This message was sent to Tier I.*

These are ready to be distributed to our folks on the ground to get out to people. If anyone needs printing assistance, let us know. And we should keep track of any costs of printing at any level to add to oil-spill related expenses.

Thank you
Lisa
